PROJECT

Angola Pavilion
Angola, Indiana

CLIENT

Trillium Dell Timberworks

SCOPE

Design and detailing of open, gable-roofed timber-framed pavilion using traditional wood-pegged mortise and tenon joinery. Design and detailing of foundations. Preparation of timber shop drawings including erection drawings and piece parts. This project was challenging because there were no code-defined wind pressures for gable-roofed open structures at the time, and the lateral load resisting system was provided solely by wood-pegged timber knee-braces. The Timber Framers' Guild used these shop drawings for their Rendezvous Workshop in the summer of 2005.
